

Position in CSS

Assignment

Q2) Difference between Absolute and relative positioning?

Ans-

1. Relative Position: Setting the top, right, bottom, and left properties of an element with position: relative; property will cause it to adjust from its normal position. The other objects or elements will not fill the gap.
position: relative;
2. Absolute Position: An element with position: absolute; will cause it to adjust its position with respect to its parent. If no parent is present, then it uses the document body as parent.
position: absolute;
